

# case study. sector - food manufacturing.

## fresh thinking.

Since 2009, we have partnered with one of the UK's most popular high street chains to provide a broad spectrum of waste services to its manufacturing facilities, warehouses, head office and 1,700 retail outlets.

### challenge.

To divert 100% of supply chain waste from landfill and deliver programmes of continuous improvement.

## solution.

As a responsible business with a clear focus on the environment, our client sets themselves important green goals, including 100% of supply chain waste being diverted from landfill. To help them meet their objectives, we have embarked on a programme of continuous innovation:

- Re-negotiation on gate fees, improved payloads via on going weight analysis, introduction of compaction equipment and diversion of materials that sites may previously have classed as general trade waste
- Sustainable Supply chain initiatives including option to change rubber gloves for compostable gloves, packaging materials and reducing the need for raw materials by identifying and implementing reuse and recycled opportunities
- Annual audit programme, focusing on internal segregation, external presentation, best practice, increased recycling rates and application of the Waste Hierarchy in line with any new waste streams coming on board

## results.
